

Trakzee GSM provides fleet managers with a sim-based tracking solution that tracks fleets only through the driver's mobile network.

Free and simple installation

How it works

GSM stands for Global System for Mobile communication. GSM can track an object only using the mobile network making it a perfect GPS alternative. GSM can help fleet managers track vehicles without internet connectivity and additional devices using just the mobile network of drivers.

Step 1

Get the SIM card of your choice

Step 2

Enter the phone number you want to track

Step 3

Get your driver's consent

Step 4

Start Tracking!

No breach of privacy

Privacy and Transparency guaranteed

GSM is a transparent and convenient alternative to standard GPS tracking. Our consent-based tracking guarantees complete privacy and transparency.

No violation of privacy

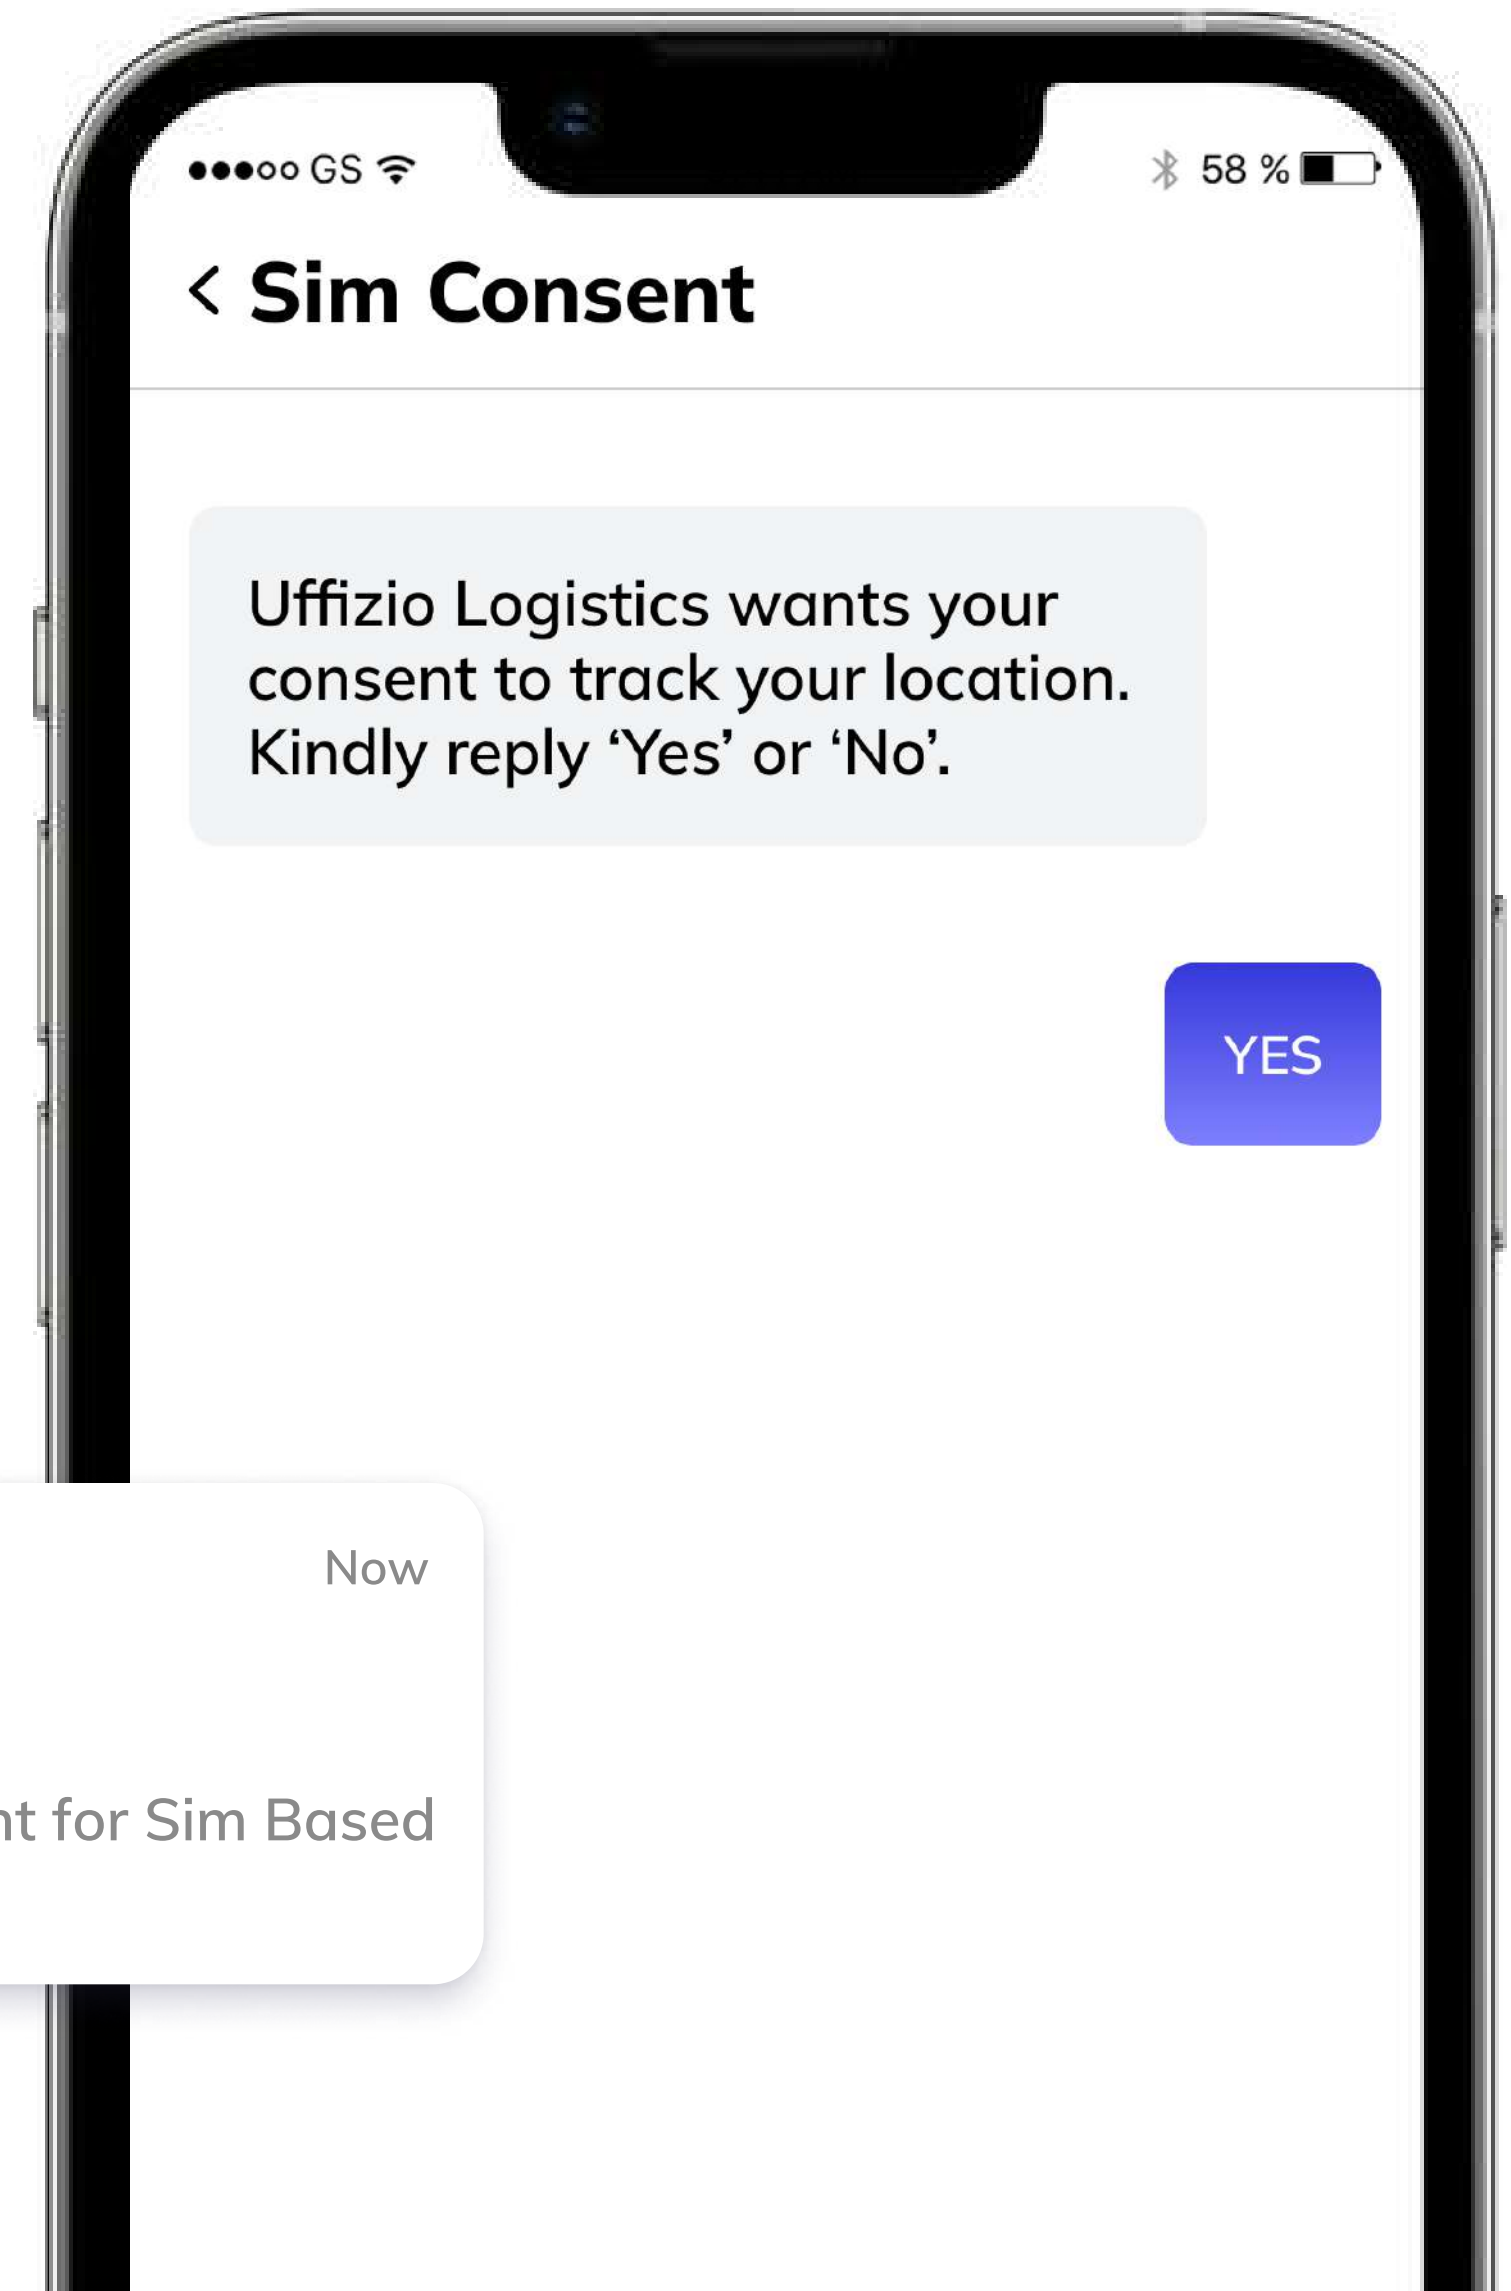

Only works if the driver approves

Consent acknowledgement via pop-up or SMS

Track vehicle only when it is needed

Now

Sim Based Tracking

John doe has approved consent for Sim Based Location Tracking

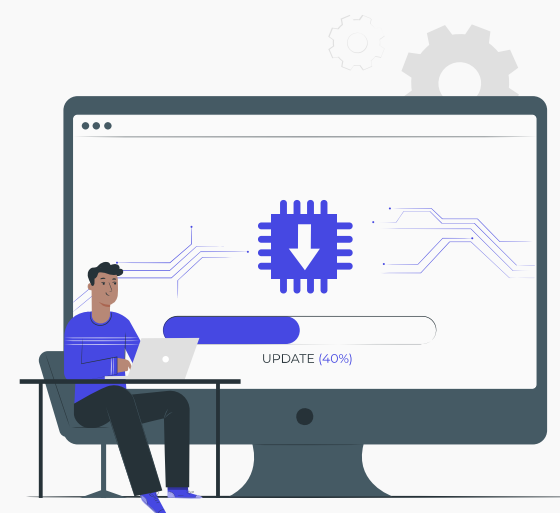

A cost-effective alternative

Save money on setup and maintenance

GSM is not only more cost-effective but also much more convenient. A tracking solution that is practically free to set up and requires no upkeep!

Truly free
installation

No additional
hardware charges

No regular
maintenance charges

No specific phone or
internet required

No internet required

Works flawlessly even in far-off areas

GSM solution solely relies on the cellular network of the drivers. This means there is no requirement for an active internet connection.

Effective tracking everywhere

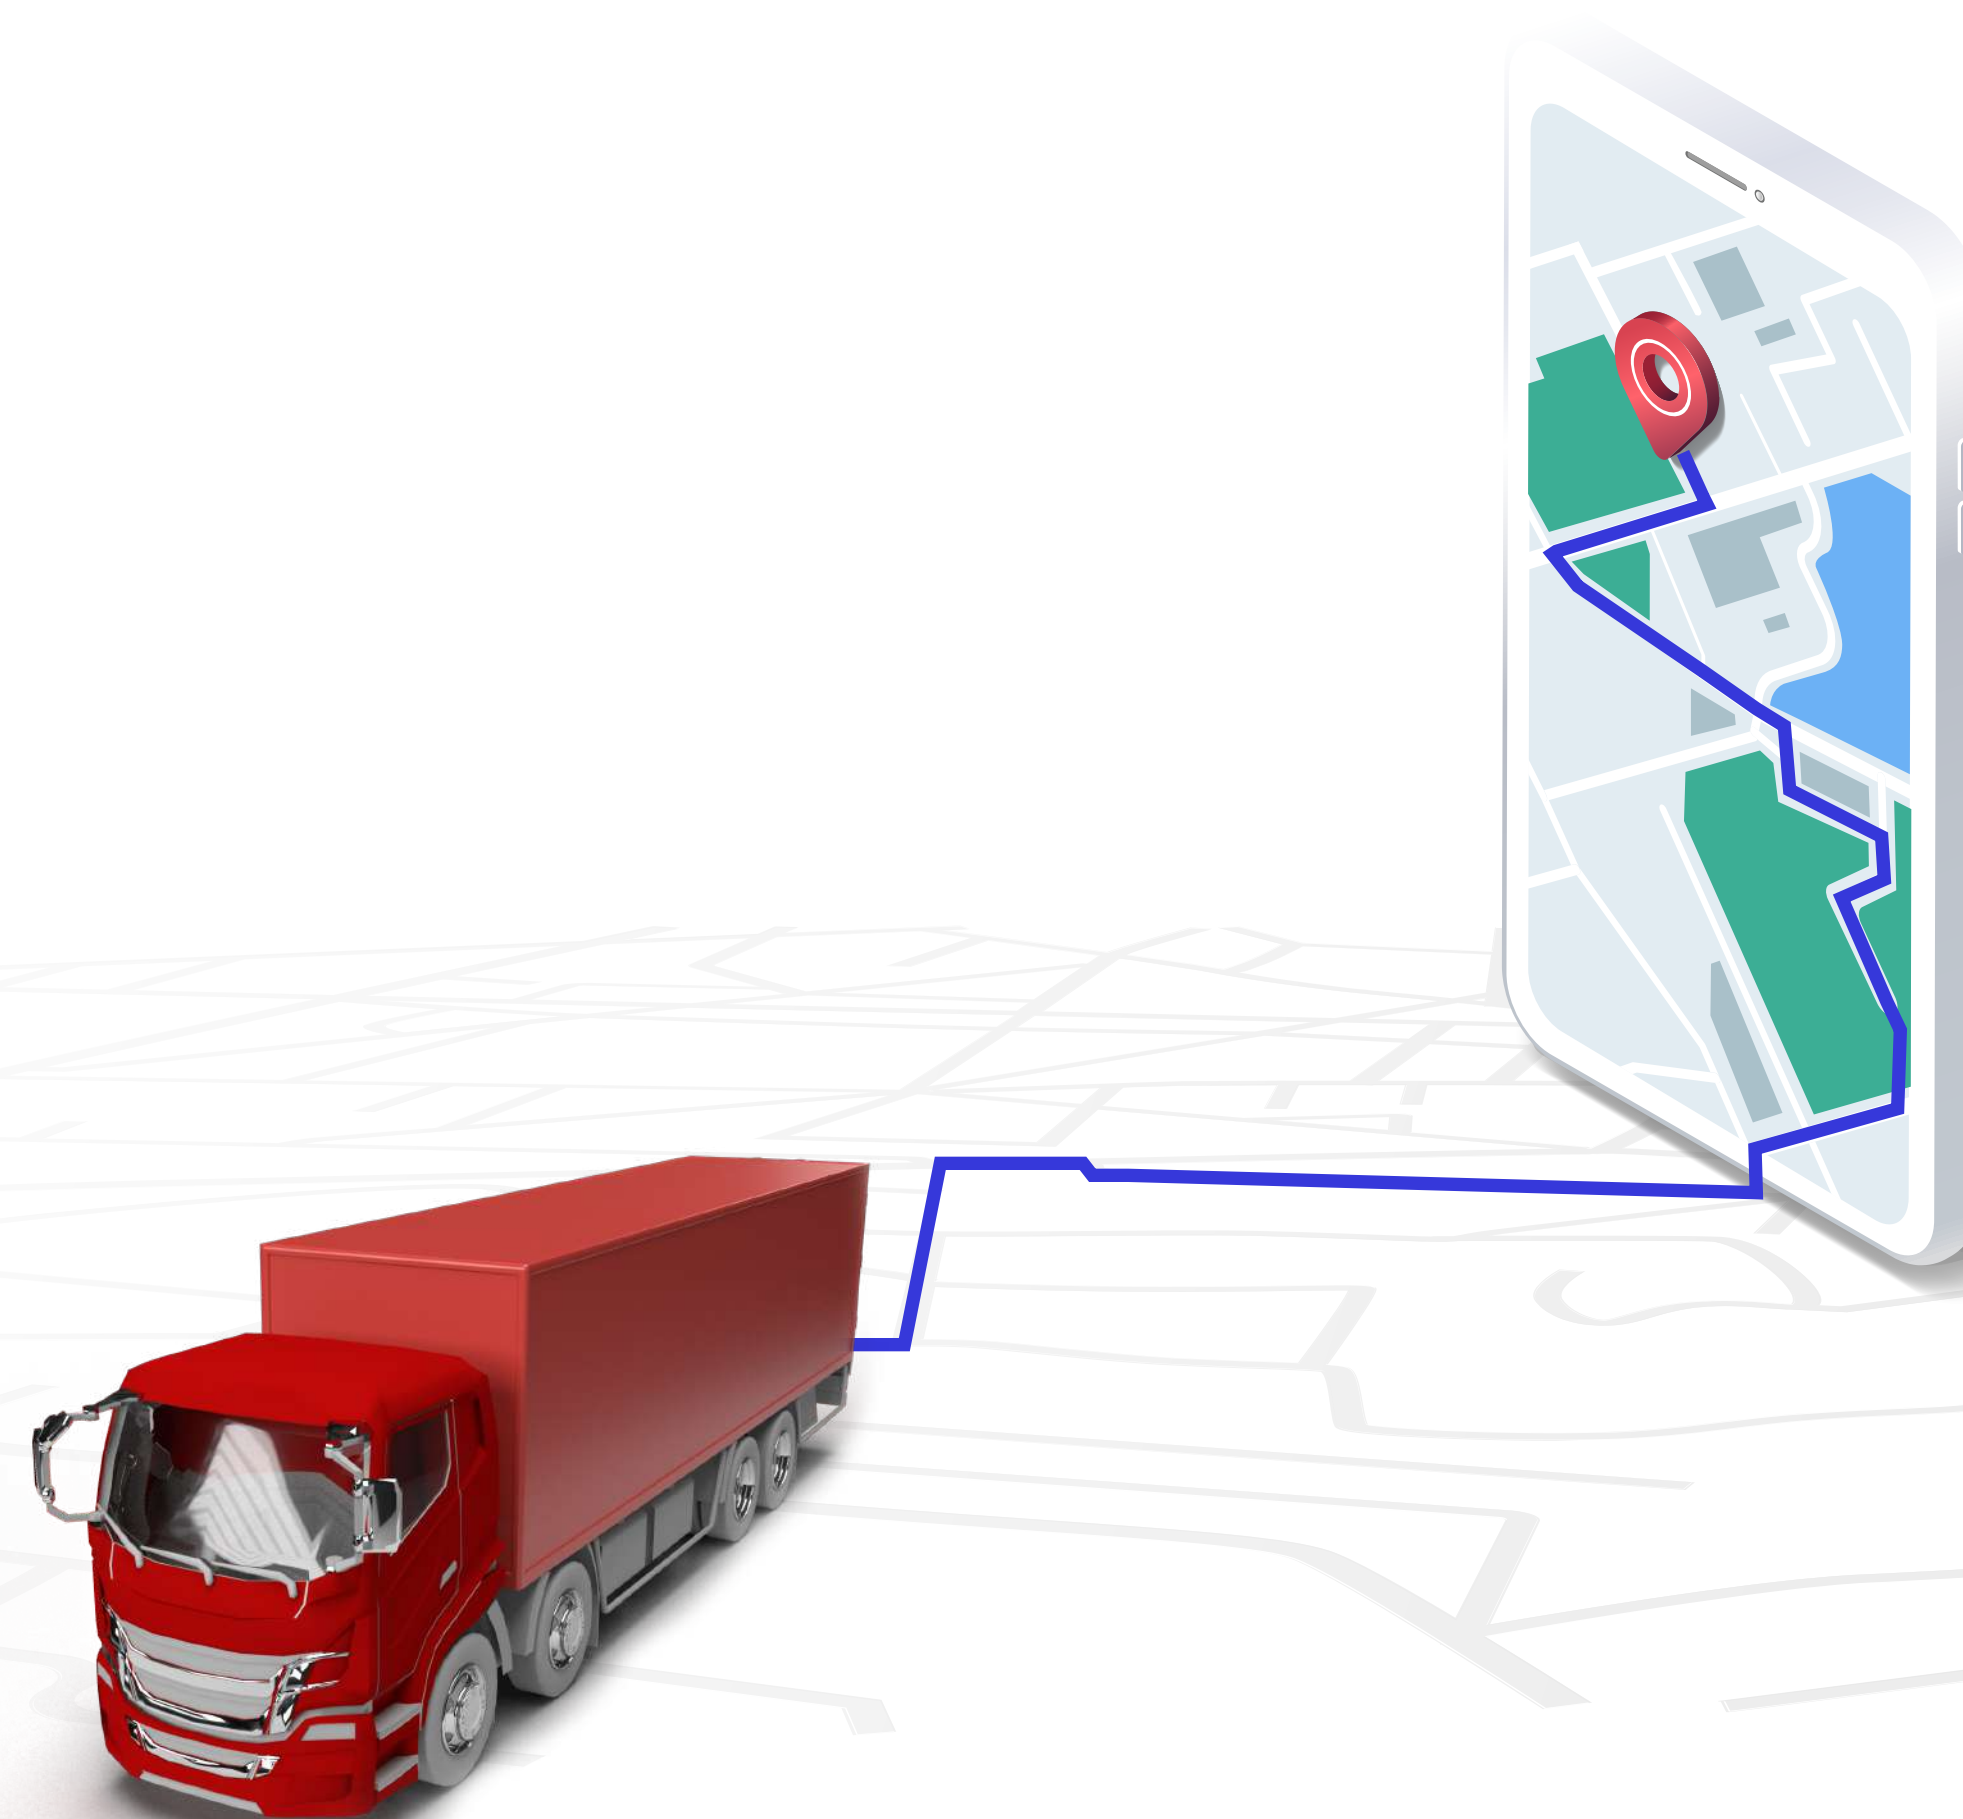

Will also work on a feature phone

Accurate tracking even in remote locations

Supports all major network operators

Convenient Mobile App

All you need, in one place

Fleet managers can take advantage of advanced fleet tracking tools accessible on the mobile app utilised by thousands of happy customers.

Live tracking of fleets with geofencing

Save time with customised dashboard

Detailed and automated reports

Real-time notifications and alerts

Live Tracking

Next-generation Live tracking

Fleet managers can track all vehicles with the app in real-time. Track all the vehicles at once and assign addresses with a comprehensive map view.

Start/stop SIM tracking with a single click

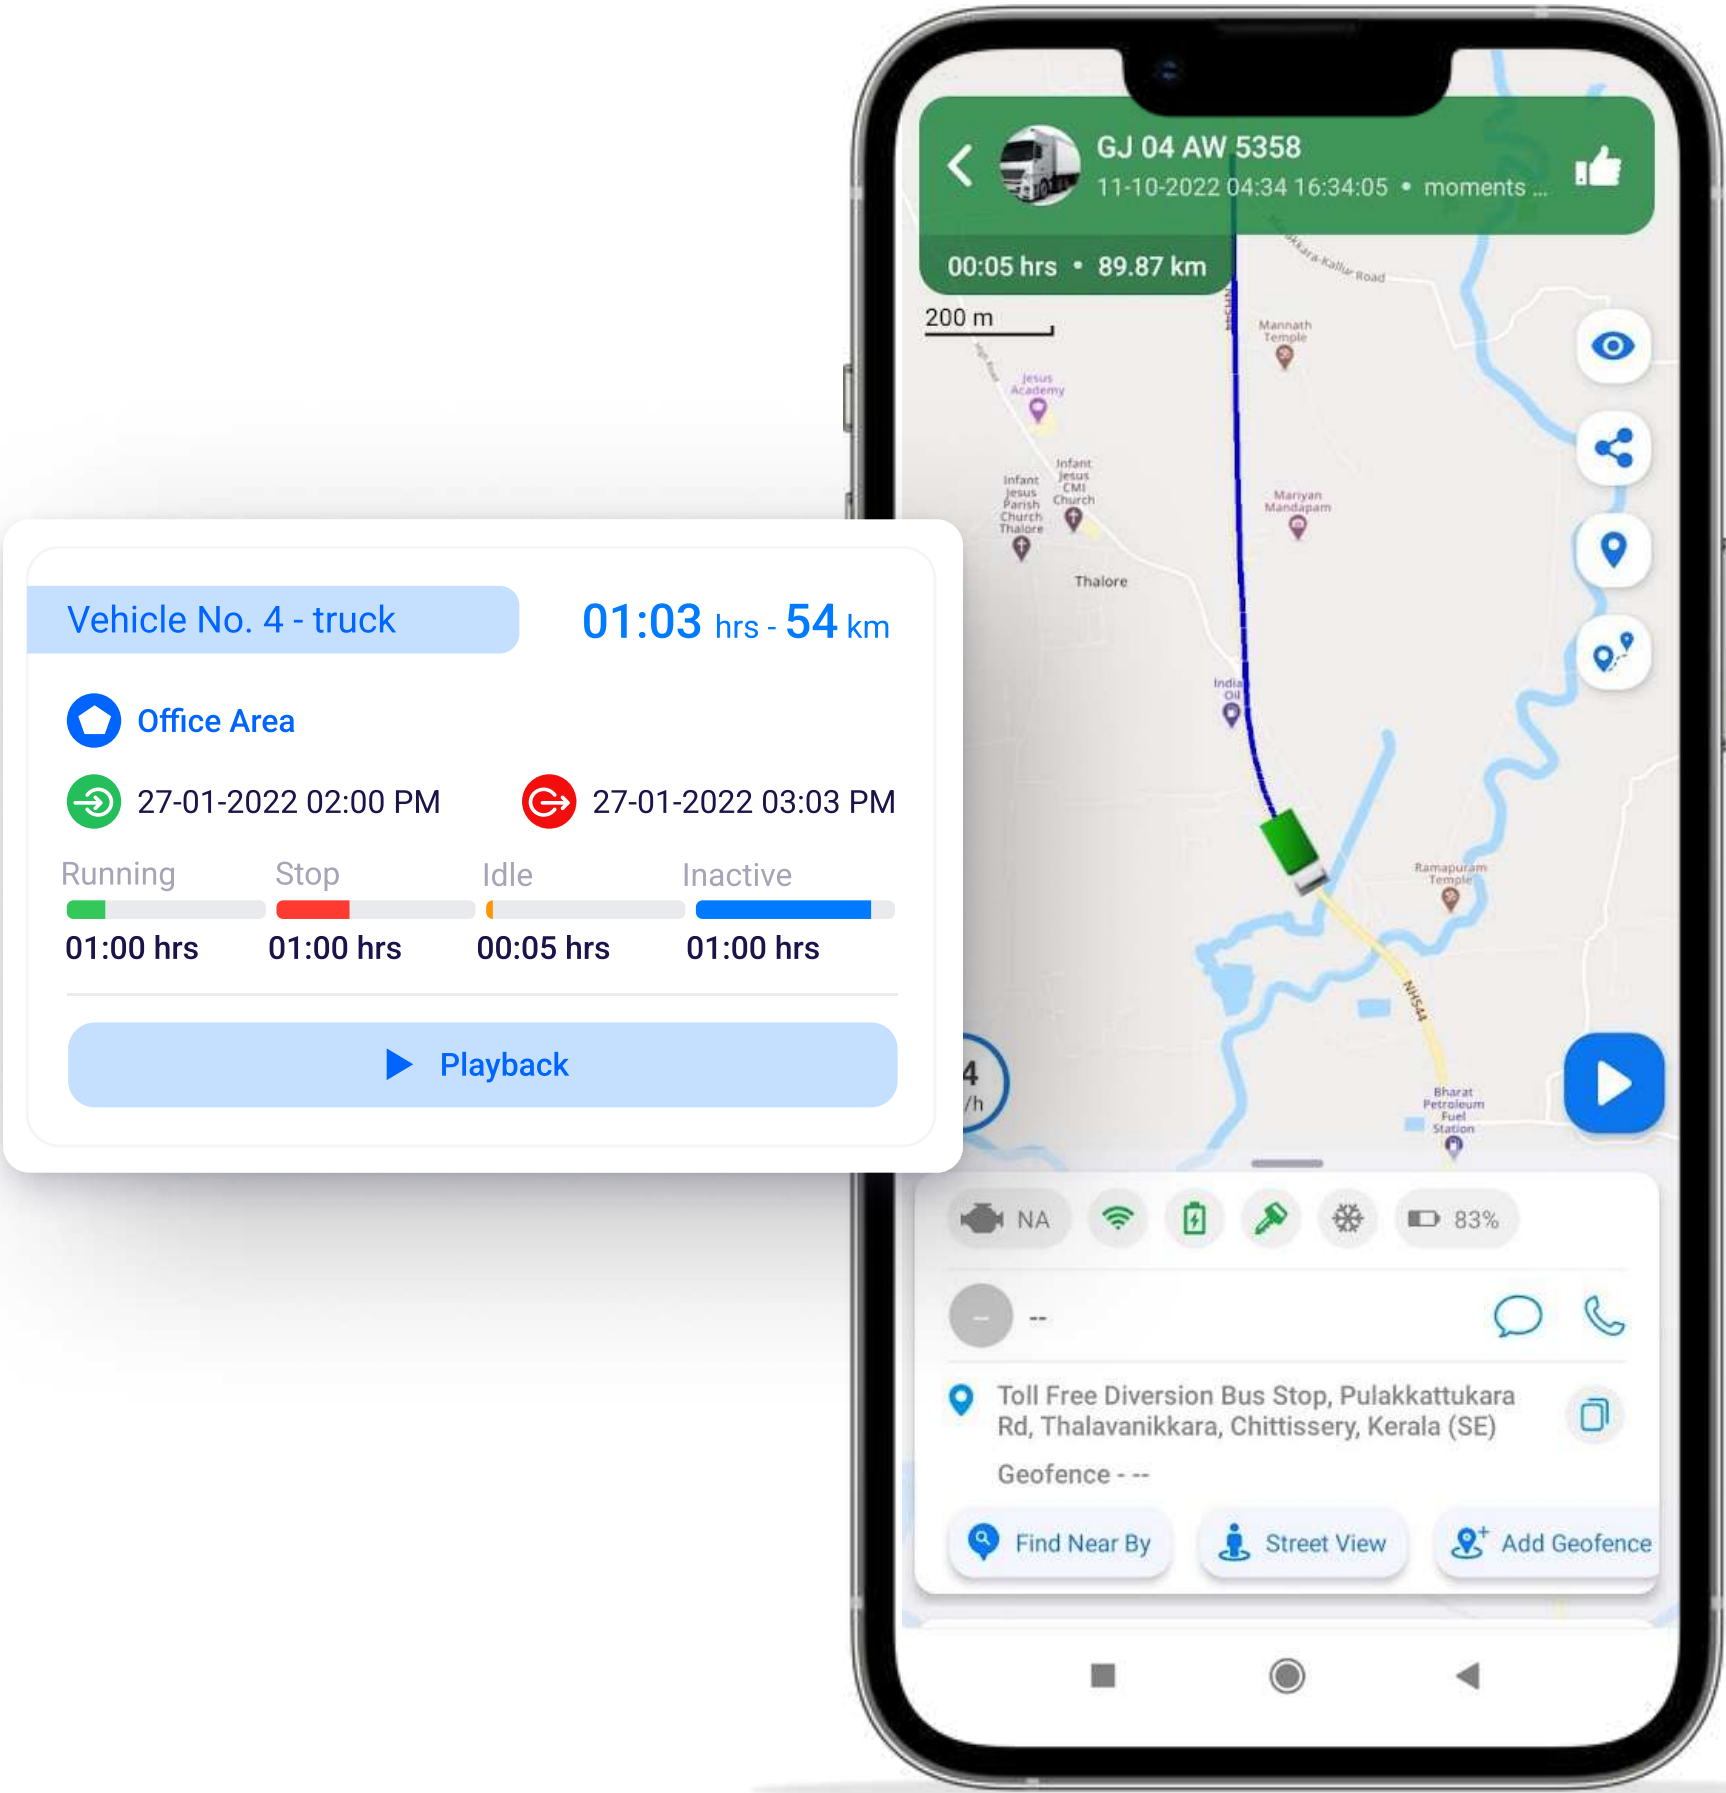

Get insights into travel hours, mileage, etc.

Real-time tracking of vehicles on the map

Playback delivery routes based on date and time.

Comprehensive dashboard

Quick access to data that matters

The app's fully customisable dashboard provides fleet managers with easy access to all the data they need to keep track of fleets.

Quick view of how many vehicles are running, idle or inactive.

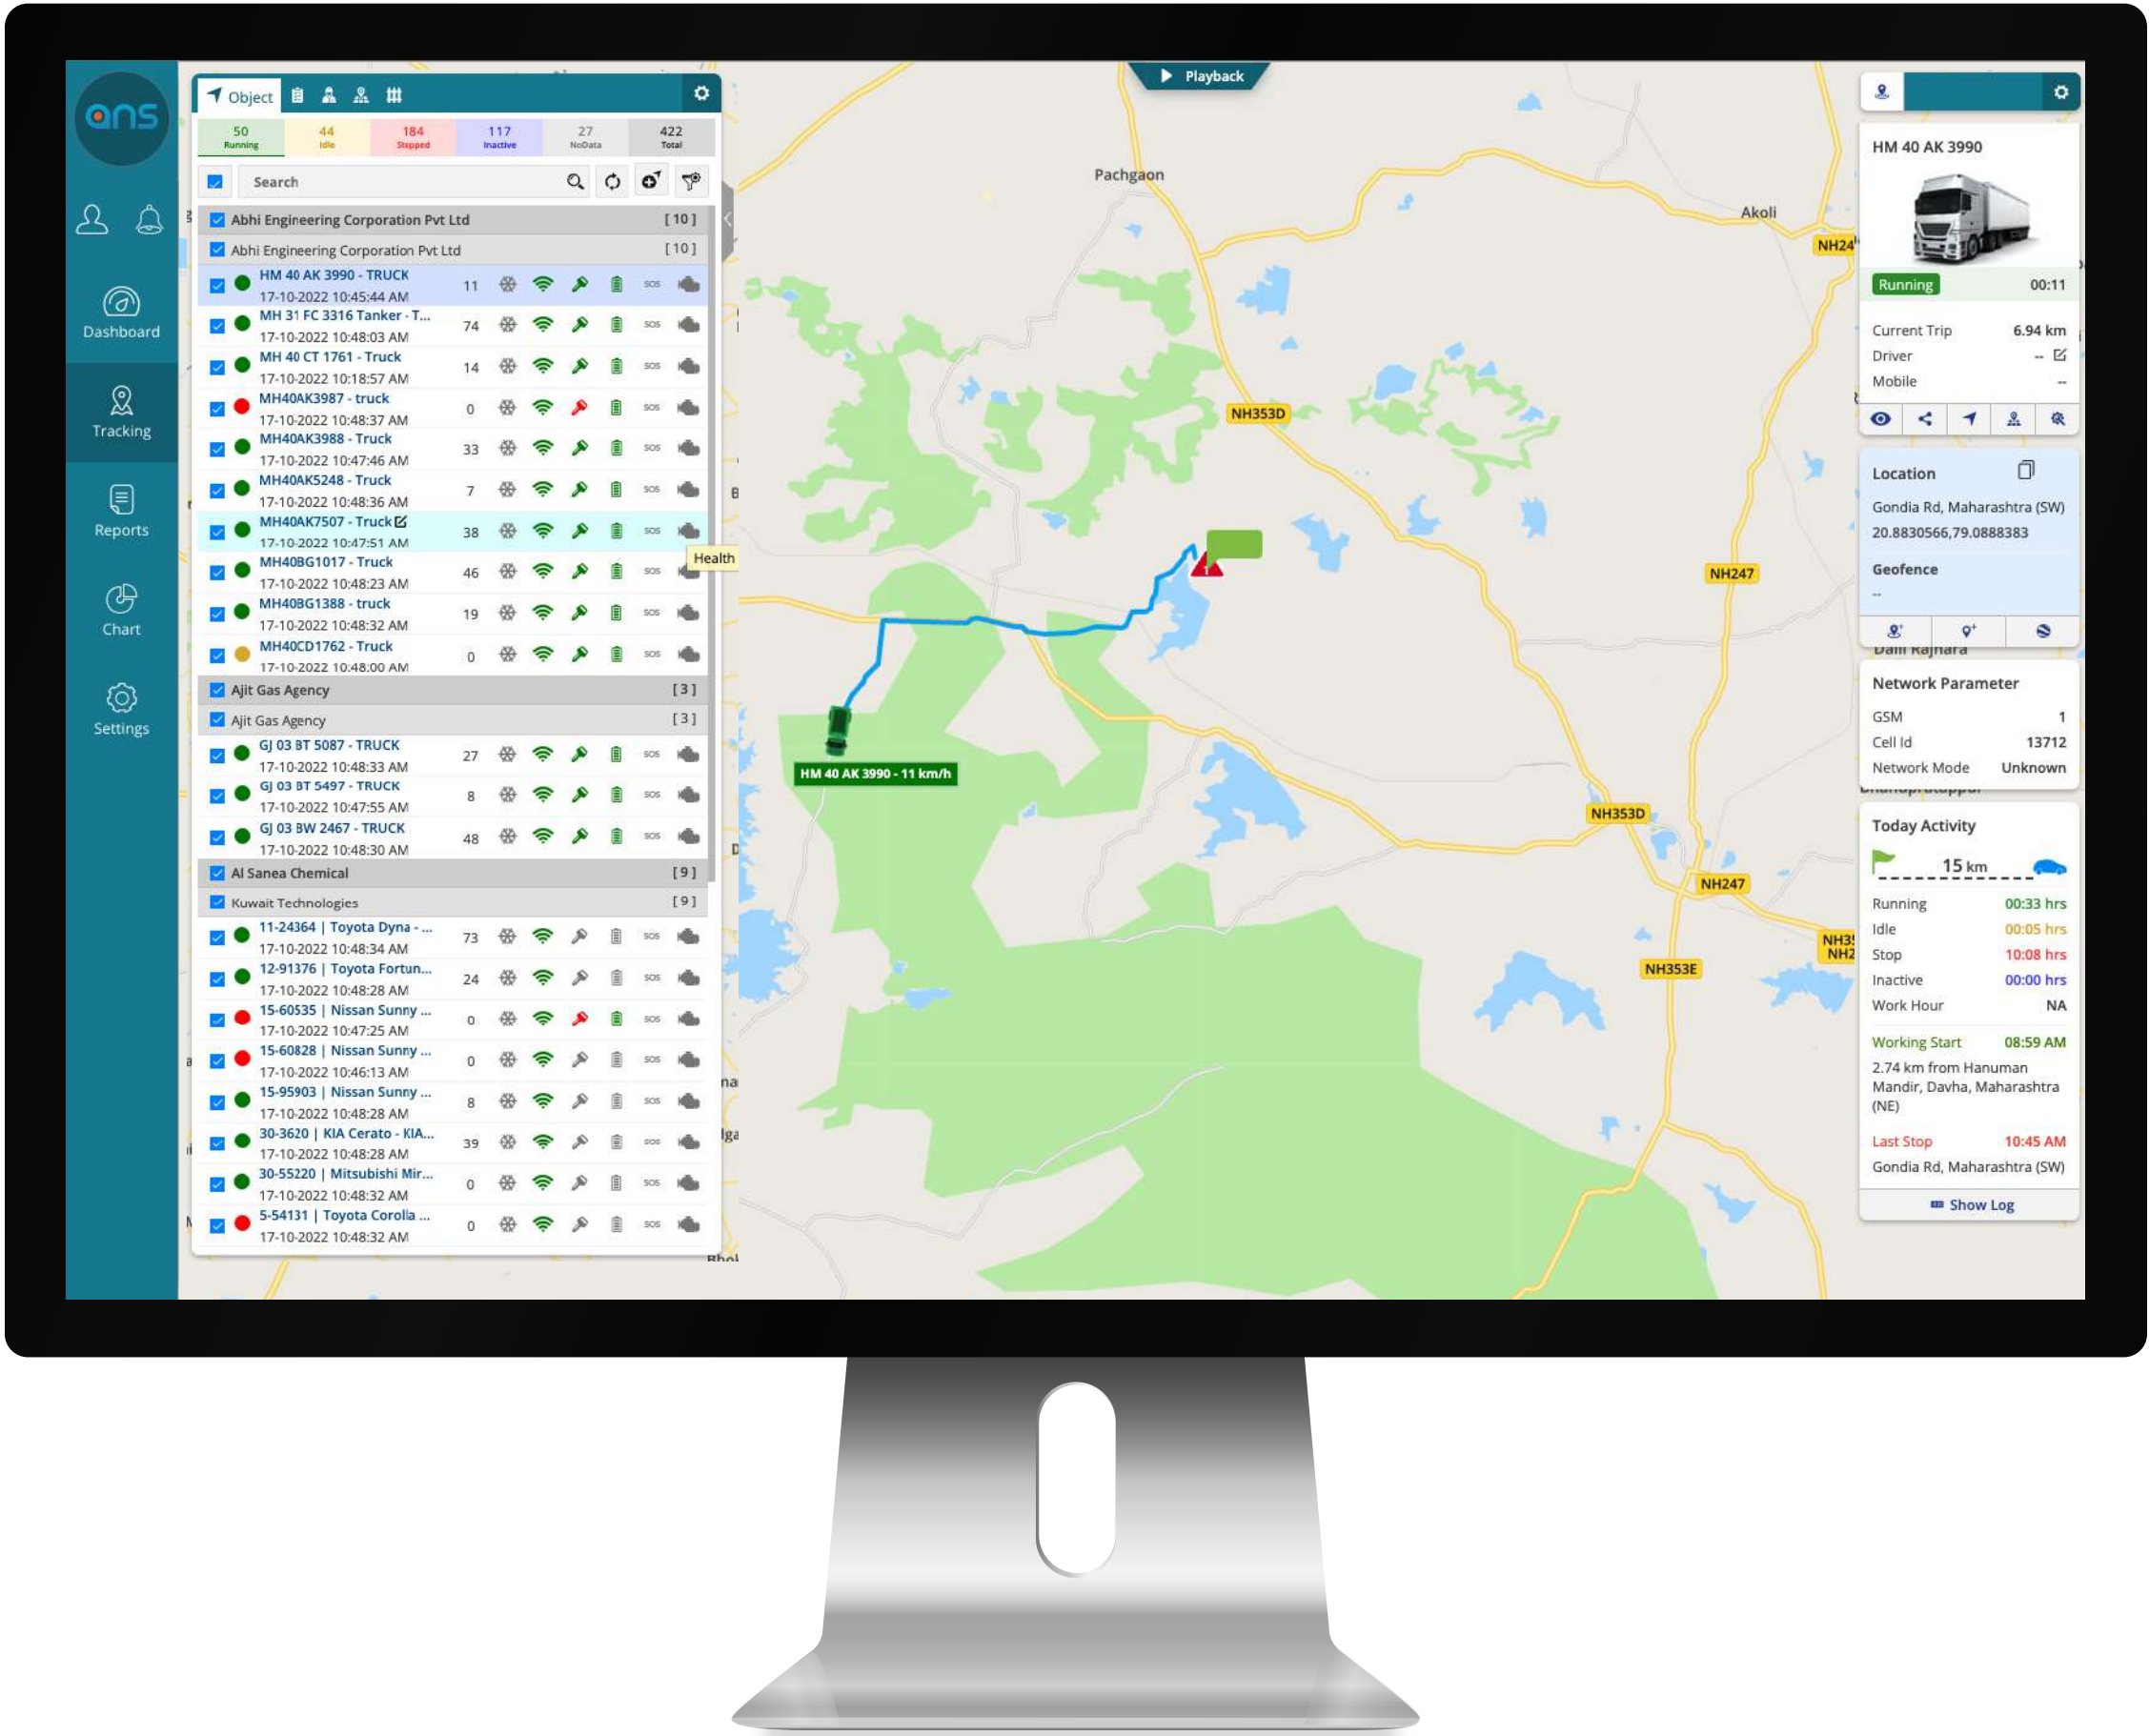

Get an at-a-glance view of fleet status and violations

Visual summaries of useful fleet parameters

Get all the important data in one place and save time

Reports and Alerts

Never miss out on what's happening

Fleet managers will always be able to stay in the loop with our detailed reports and real-time alerts.

From active status to stoppage, get detailed vehicle reports

Get alerts every time vehicles reach or leave an address

Customised alerts based on business requirements

Resolve alerts instantly with SMS/emails

Geofencing-address

Optimize operations with geofencing

An area on the map with a defined radius can be set as a geofence. Fleet managers can create geographical mandatory or no-go zones with virtual borders.

Alerts for leaving and entering geofence

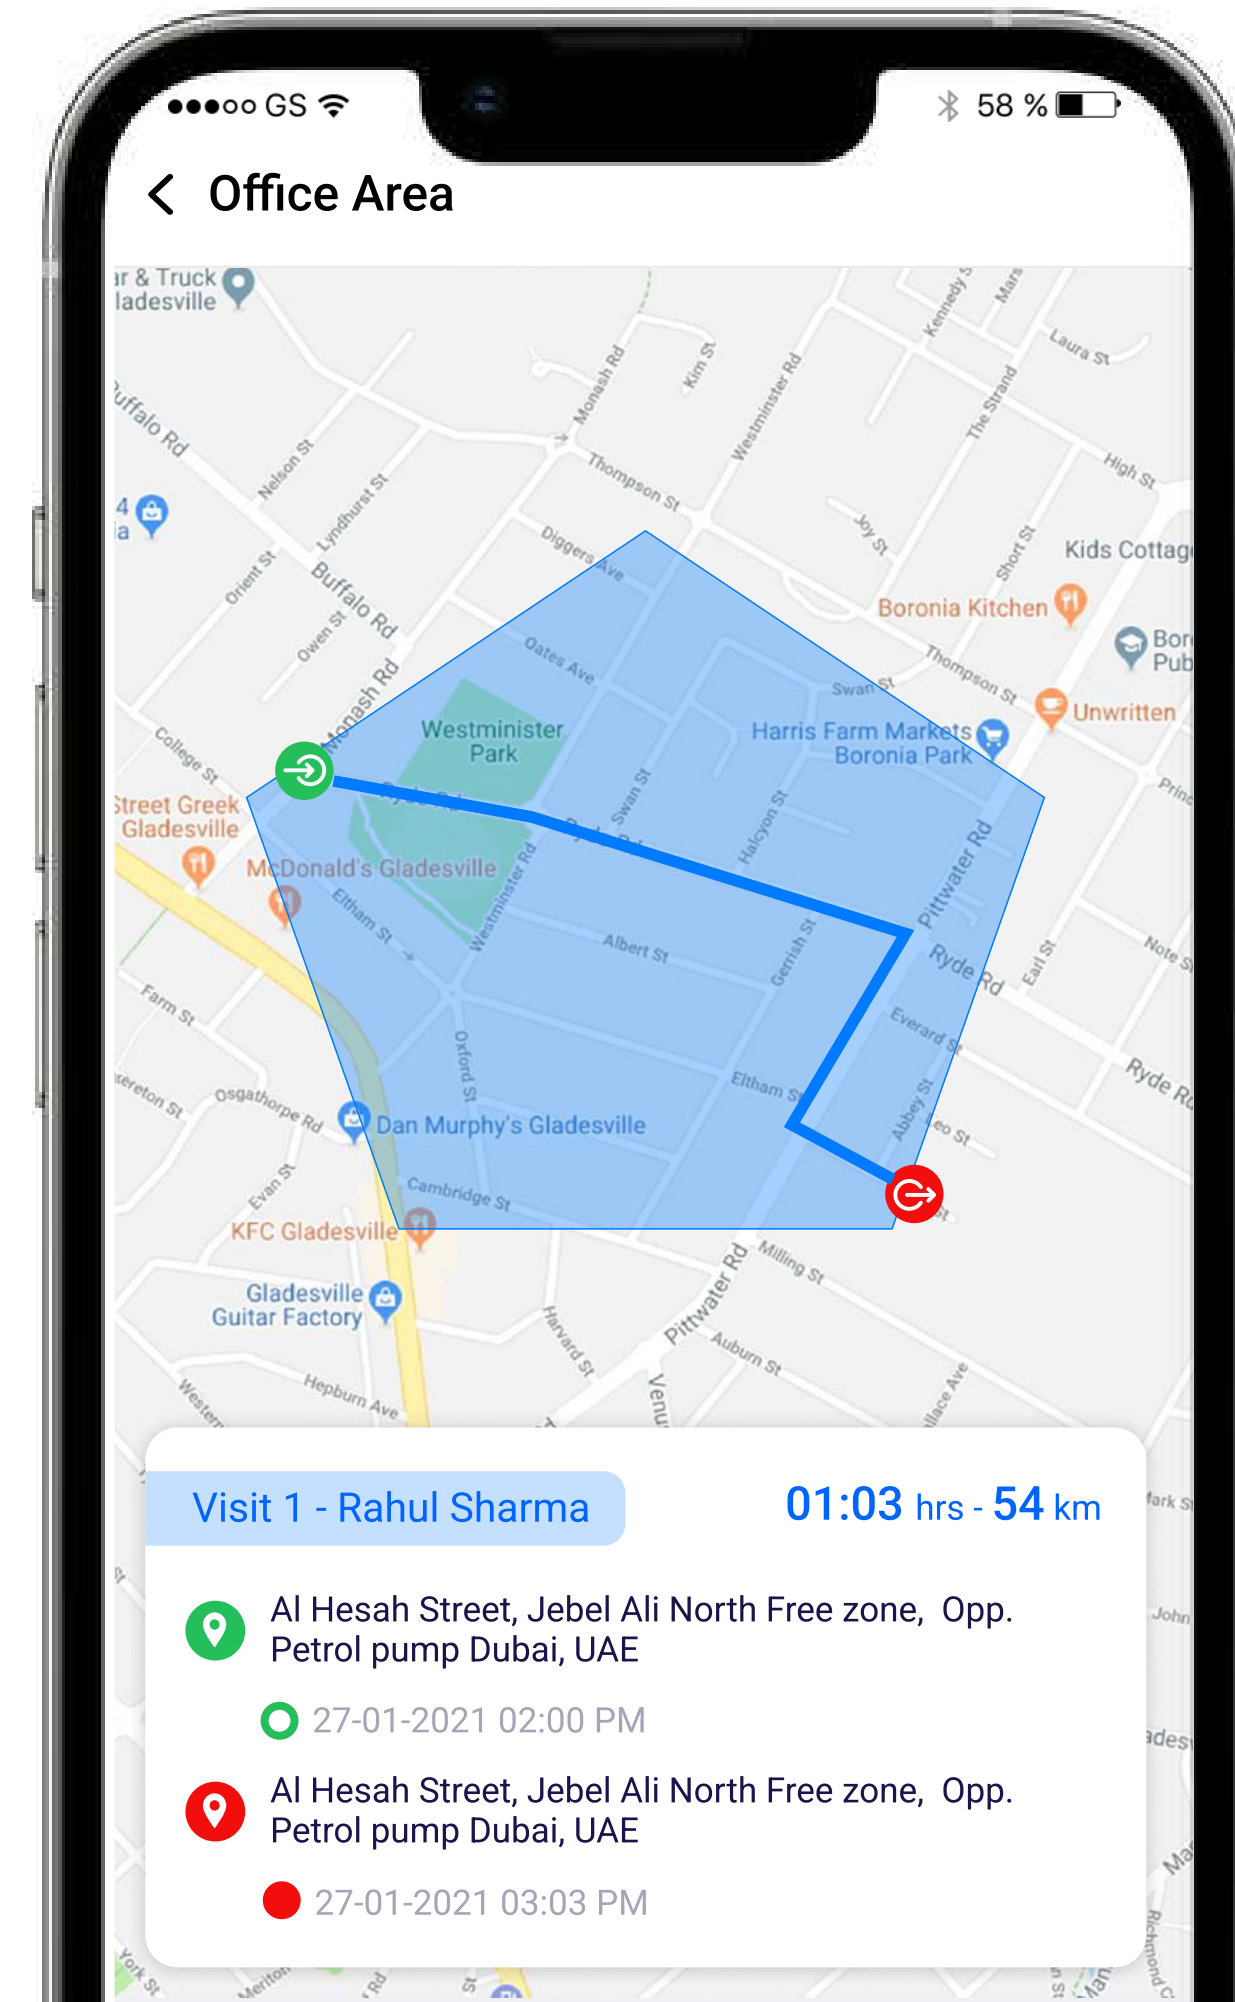

Inactivity and overstay alerts

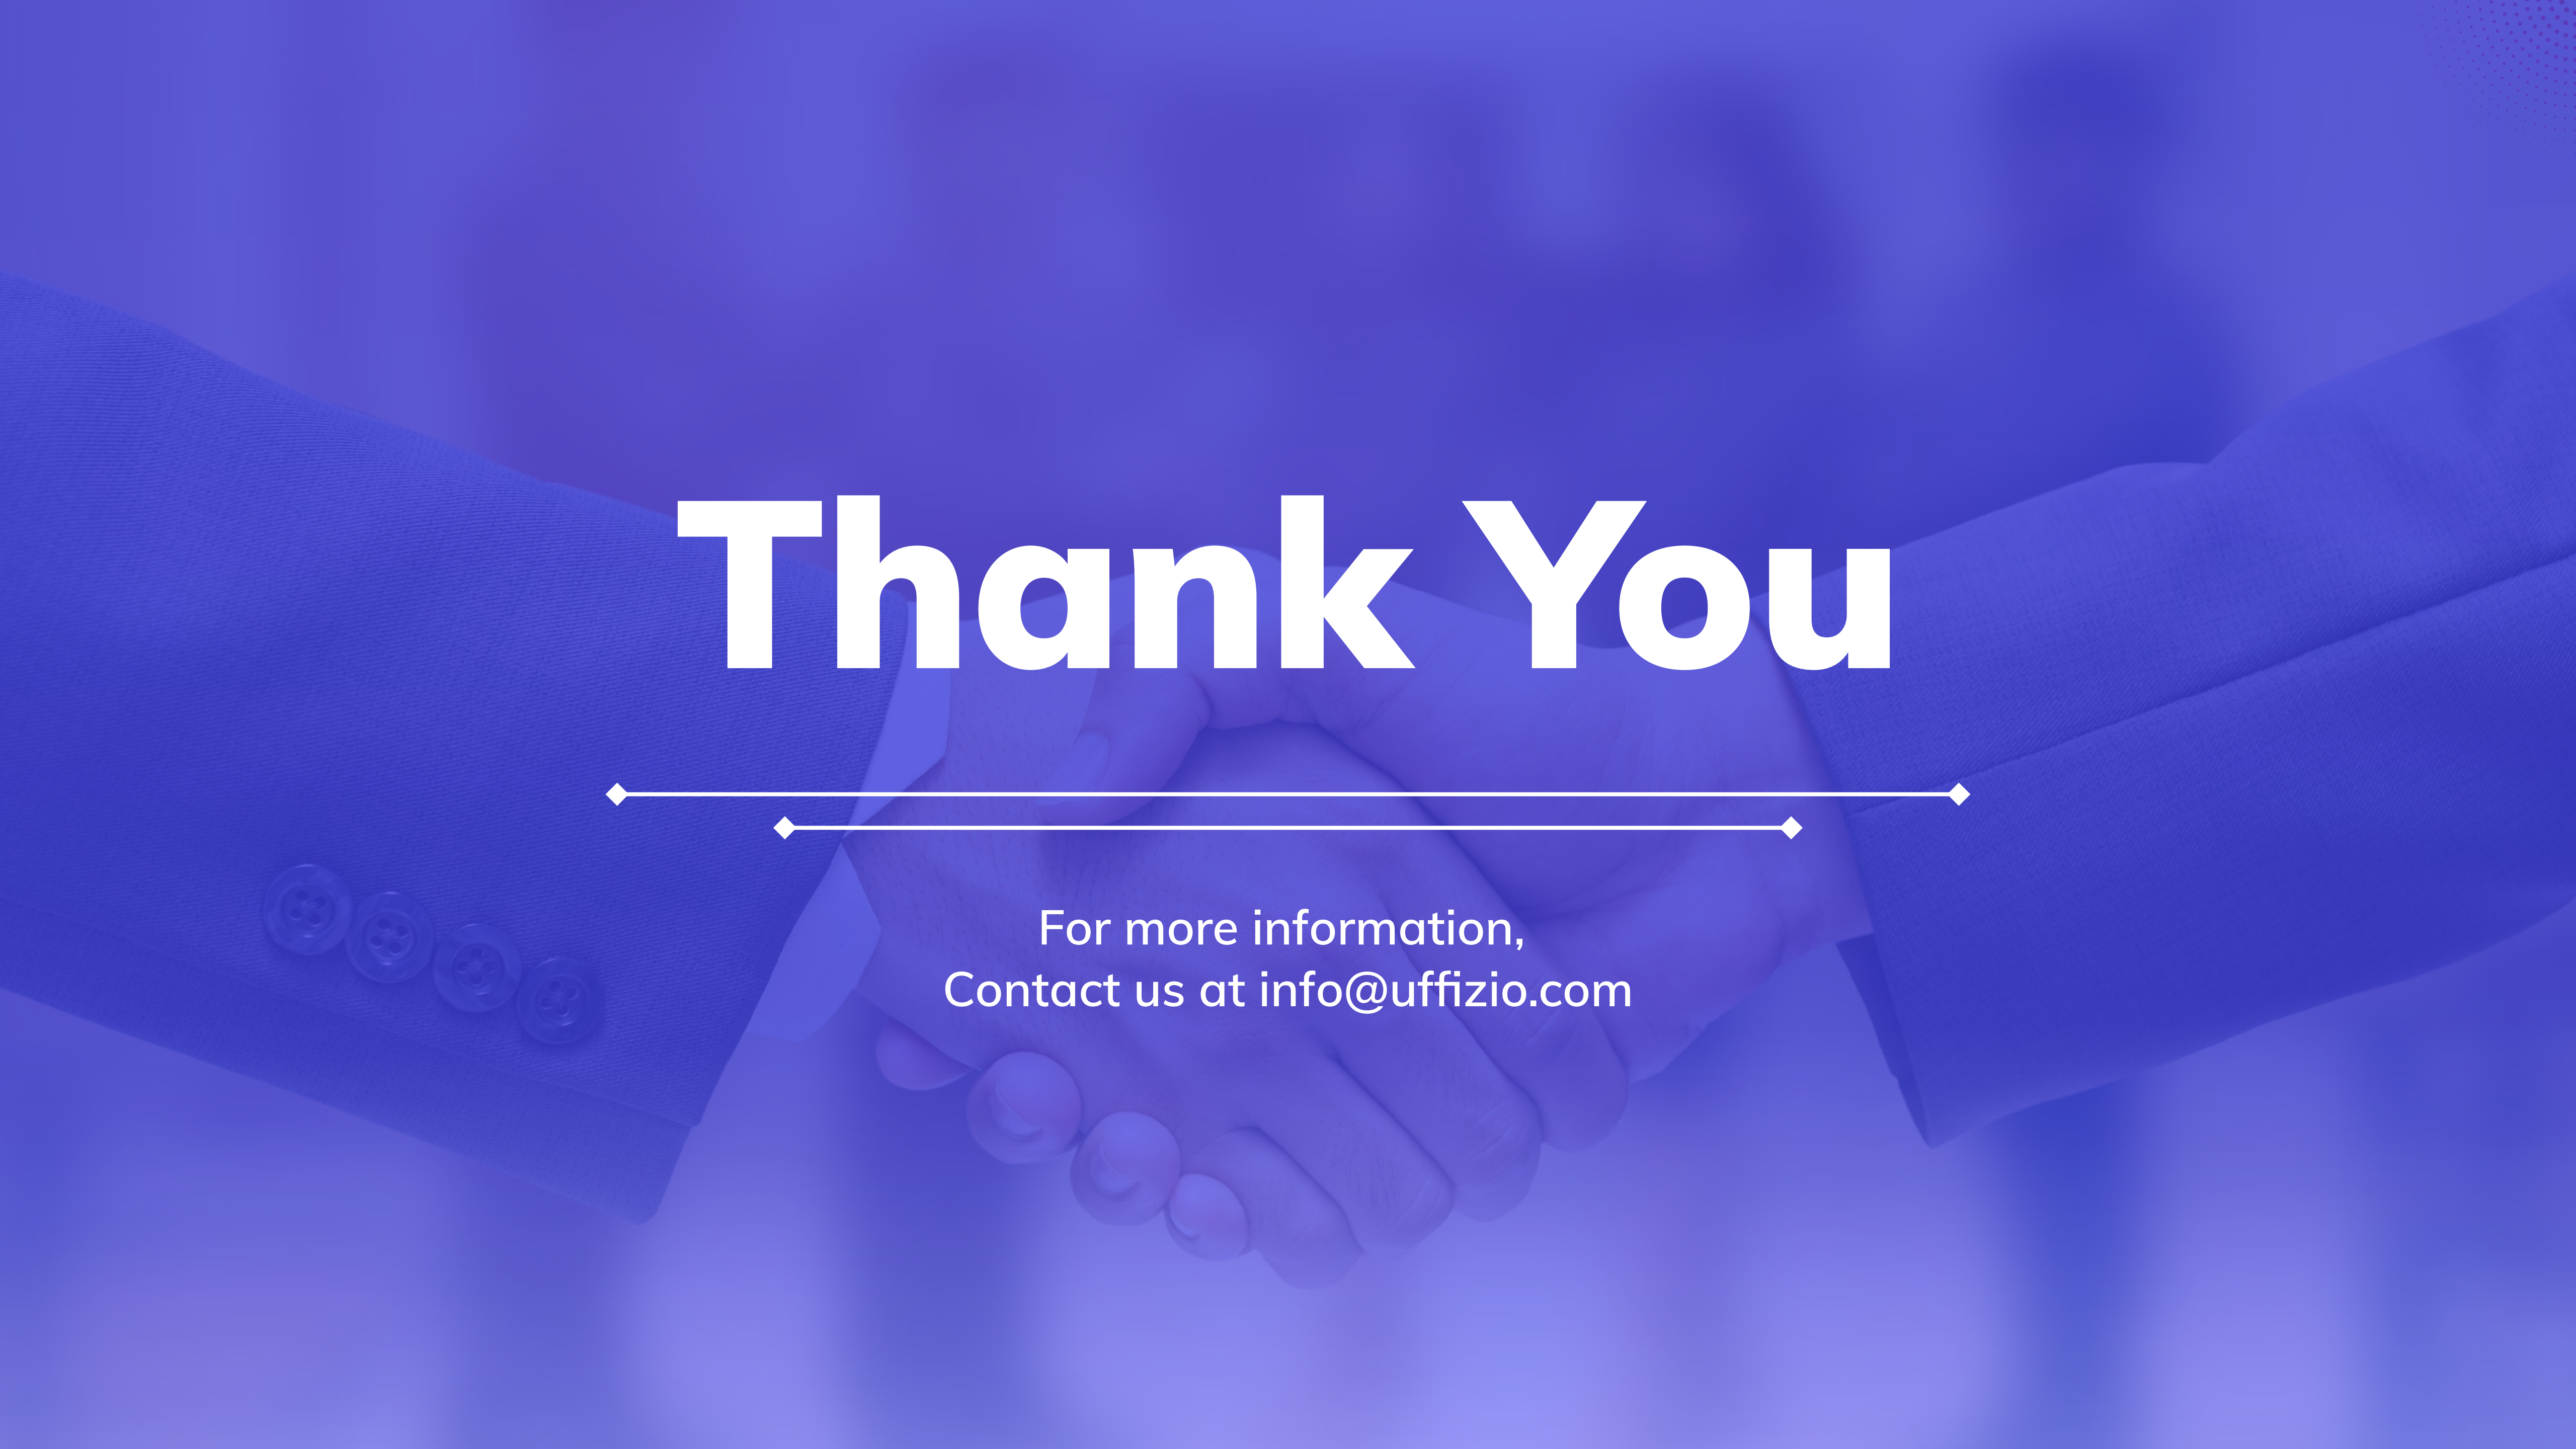

Know when a vehicle reaches or departs an address

Notifications for reaching and passed address
